

This unit is used to eliminate most of the wax tree inside an invested flask by steam. Due to the humidity that is caused by the steam, the investment obtains a nice and a smooth surface around the wax articles. Due the limited temperature, the flask can be placed without problem inside the burn-out furnace without the risk of damaging the investment characteristics.

### MOD. DW/300

#### Technical information :

- Dimensions : 800 x 700 x 900 mm
  - Weight : 77 kg
- Power supply : 230V 50/60 Hz 1900 W
